

- Test 2 has been posted to D2L - due on April 3 by midnight (take home test)
- can use references, but not each other
- Fast Fourier Transform - A function can be determine with degree + 1 points

String Matching

- Brute force
- For better efficiency, match the longest prefix of a pattern with the longest suffix of text

Knuth-Morris-Pratt

P4 is the first four letters

$\pi(P5) = \pi(ababa)$, so $\pi(P5) = 3$

Calculate π for all P of i
